

Section 4

Application User Guide

User Manual — step-by-step instructions

This chapter illustrates the main features of **NutriApp** through detailed instructions and screenshots taken directly from the application. Each section is divided into progressive steps to facilitate understanding even for less experienced users.

Section Index

1. Login and Registration
2. Navigation Bar
3. Adding Food
4. Setting Goals
5. Viewing Progress
6. Account Settings

1 Login and Registration

Upon opening the application for the first time, the welcome screen is displayed, from which you can access an existing account or create a new one. NutriApp supports three login methods: email and password credentials, authentication via Google account, and authentication via Apple ID. You can also explore the app in guest mode without creating an account.

1.1 Welcome and Login Screen

Step 1.1.1 — Open the application

Figure 1: Welcome screen of **NutriApp**: at the top is the green logo and the subtitle *Log in to manage your meals, macros, and micros all in one app*. The central white panel shows the **Email** and **Password** fields (with an eye icon to show/hide characters), the green **LOG IN** button, and the link *Continue without logging in*. Below the *or* separator are the **Log in with Google** and **Log in with Apple** buttons, and at the bottom is the link *Don't have an account? Sign up*.

Description

When you first open NutriApp, the login screen appears with the app's name in dark green and a subtitle briefly describing its function. The central login panel has two fields:

- **Email** — email address associated with the account, indicated by the envelope icon to the left of the field
- **Password** — account password; touch the crossed-out eye icon to the right of the field to toggle between showing the characters in plain text or masked

After filling out both fields, press the green **Log In** button to complete the authentication and enter the application.

Continue without logging in

By tapping the link *Continue without logging in*, you can explore the application in guest mode, without creating or entering credentials. In this mode, data is not synced to the cloud and is not accessible from other devices. It is recommended to create an account so you do not lose entered data.

If you forget your password, you can recover it via the recovery procedure available on the official NutriApp website: the system sends a reset link to the email address associated with the account.

1.2 Log in with Google

Step 1.2.1 — Select quick login via Google

(a) Login screen: at the bottom of the white panel is the **Log in with Google** button with the G logo on the left. Tapping it opens the selector for Google accounts present on the device.

Description

Tap **Log in with Google** on the login screen to start quick authentication. The operating system automatically opens the Google account selection window, which shows

(b) System window **Choose an account**: shows all Google accounts saved on the device with profile picture and email address (obscured for privacy). At the bottom is the option *Add another account* to add an account not yet present, and the note that Google will share your name, email, and profile picture with NutriApp.

all Gmail accounts already configured on the device. Each entry in the list shows the profile picture and the email address of the account.

How to proceed

- **Tap your account** in the list to select it and authorize NutriApp to access your name, email, and profile picture. The login is completed automatically without further steps.
- **Tap *Add another account*** if the desired account is not in the list: the standard Google login flow will open to add a new account to the device.

Next step

After selecting the account, the application authenticates the user and goes straight to the main screen. If this is the first login with that Google account, the initial profile setup flow will be started.

Logging in with Google is the fastest method: it does not require you to remember a separate password and updates automatically if you change your Google password. It is recommended for those who already use Google on other services.

1.3 Create a New Account

Step 1.3.1 — Open the registration form — Step 1

10:50

Figure 3: Screen **Registration** — Step 1 of 3: the progress indicator at the top shows the first dash as green (active) and two as gray (to be completed). In the center is the placeholder avatar with the green camera icon to add an optional photo. The form fields are: **First Name**, **Last Name**, **Email**, **Password**, and **Confirm Password**. At the bottom is the green **SIGN UP** button.

Description

Tap the green link *Don't have an account? Sign up* on the login screen to open the three-step registration wizard, displayed by the progress indicator at the top (green dash = current step, gray dashes = upcoming steps).

Step 1 — Personal Data and Credentials. Fill out the following fields:

- **First Name** and **Last Name** — the full name that will be displayed in the app and in the greeting on the main screen

- **Email** — the email address that will act as the unique identifier for the account; it must be valid because it will be used for verification via an OTP code in the next step
- **Password** — choose a strong password of at least 8 characters; it is recommended to include uppercase letters, lowercase letters, numbers, and special characters
- **Confirm Password** — re-enter the same password to prevent typos; the two fields must match exactly to proceed

Profile Photo (optional). Tap the green camera icon superimposed on the gray avatar to take a photo or choose one from the gallery. The photo is optional and can be added or changed at any time later from the *My Profile* section in the settings.

Next step

Check that all required fields are correctly filled out, then press the green **SIGN UP** button to proceed to the next step.

Step 1.3.2 — Verify your email address — Step 2

Figure 4: Screen **Registration** — Step 2 of 3: the indicator shows the first two dashes as green and the last as gray. In the center is an envelope icon with a green checkmark and the title **Verify your email**. The text indicates that an OTP code has been sent to the entered email address (partially obscured). The **OTP Code** field awaits input. The link *Send again* allows you to request a new one. At the bottom is the green **CHECK EMAIL** button.

Description

After pressing **Continue** in the first step, the application automatically sends an OTP (One-Time Password) code to the entered email address. The screen shows an envelope icon with a green checkmark and indicates to which address the code was sent.

How to complete verification

- Open the inbox of the email address used during registration and look for the NutriApp verification email
- Note or copy the 6-digit OTP code found in the email

- Return to the app and enter the code in the **OTP Code** field
- Press **CHECK EMAIL** to confirm the email address and proceed to the final step

Code not received

If the code does not arrive within a few minutes, check your provider's *Spam* or *Junk* folder. Alternatively, tap the link *Send again* to request a new OTP code. The link becomes active after a short waiting period to prevent rapid multiple requests.

The OTP code is valid for a limited time (usually 10–15 minutes). If you wait too long before entering it, you will need to request a new one via the Send again link.

Step 1.3.3 — Complete registration — Step 3

Figure 5: Screen **Registration** — Step 3 of 3: all three dashes on the indicator are green, signaling the completion of the process. In the center is a green circle with a white checkmark and the title **Great job!** with the subtitle *You are ready to start your journey with NutriApp.* At the bottom is the green **GO TO HOMEPAGE** button.

Description

After successful verification of the OTP code, the app shows the confirmation screen. All three dashes of the indicator turn green. The message **Great job!** confirms that the account has been created and verified correctly. Press **GO TO HOMEPAGE** to enter the application.

Summary of Login Methods

Method	Requirement	Ideal for
Email + Password	NutriApp Account	Those who prefer dedicated credentials
Log in with Google	Gmail Account on device	Quick access without password
Log in with Apple	Apple ID (iOS only)	iPhone/iPad users
Without logging in	None	Quick exploration of the app

2 Navigation Bar

The navigation bar is the persistent element of the interface: it appears at the bottom of every screen and allows you to instantly move between the five main areas of the application with a single tap.

2.1 View the Navigation Bar

Step 2.1.1 — Open the application

Figure 6: Main screen **NutriApp**: daily caloric summary with circular graph, macronutrient bars (Carbs, Protein, Fat) and the four meal time slots. The navigation bar at the bottom with the icons NutriApp, Calendar, Add, Recipes, and Charts.

Description

When you open the application, the main screen is shown with a personalized greeting at the top, the current date navigable with the < and > arrows, and a green circular graph indicating the calories remaining for the day. To the right of the graph are horizontal colored bars for Carbs (orange), Protein (green), and Fat (pink/red), each showing the

consumed value compared to the goal. The four time slots — Breakfast, Lunch, Dinner, and Snack — are accessible via the + button next to each one.

Bar Elements

- **NutriApp** (house icon) — main screen with caloric summary, macronutrients, and daily meal sections
- **Calendar** (calendar icon) — monthly view with a green/red color code for days with or without logged meals
- **Add** (central green + button) — quick access to the food entry screen
- **Recipes** (book icon) — list of saved recipes
- **Charts** (line chart icon) — nutritional statistics with daily, weekly, monthly, and yearly views

The active icon is highlighted in green on the bottom bar. The green + button in the center is always available to quickly add a food item: it's the fastest route for daily logging.

3 Adding Food

The application offers multiple ways to log meals: searching the global database, selecting from saved foods, adding an already created recipe, and scanning the product's barcode.

3.1 Open the Entry Screen

Step 3.1.1 — Go to the main screen

Figure 7: HomePage: circular graph with remaining calories, macronutrient bars, and the four time slots each with the + button.

Next step

Press the + next to the desired time slot (Breakfast, Lunch, Dinner, or Snack) or press the large green + button in the center of the navigation bar to access the *Add* screen.

3.2 Choose the Entry Method

Step 3.2.1 — Select the food source

[Register it yourself!](#)

NutriApp Calendar **Add** Recipes Charts

(b) Screen **Add** with active tab *Add Food*: search bar with barcode icon. Below is the link *Can't find the food? Register it yourself!*

Description

The *Add* screen has three tabs at the top:

- **Add Food** — search the global database or scan the barcode
- **Saved Recipes** — recipes created by the user with the total calories of each
- **Saved Foods** — previously manually registered foods

Step 3.2.2 — Navigate between Saved Recipes and Saved Foods tabs

(a) Tab **Saved Recipes**: each recipe shows its name and total calories. At the bottom is the link *Insert new recipe*.

(b) Tab **Saved Foods**: search bar; if there are no saved foods, the message *No saved food* appears.

Manually entered foods are automatically saved in the Saved Foods section and will be available for future entries without having to re-enter them from scratch.

3.3 Manual Food Entry

Step 3.3.1 — Fill out the entry form

CONFERMA

(b) Section **Ingredient** with expandable sections *Fat Details*, *Vitamins*, and *Minerals* for complete nutritional tracking.

Description

Tap *Register it yourself!* to open the manual entry form. Fill out at least the mandatory fields in the **Macronutrients** section by reading the values from the product packaging (*Nutritional values per 100 g* label). For complete tracking, you can expand the **Fat Details**, **Vitamins**, and **Minerals** sections.

3.4 Entry via Barcode Scan

Step 3.4.1 — Start the scanning camera

Figure 11: Scanning screen **barcode**: the camera focuses on the back of a package. The green frame delimits the recognition area. At the top are the controls **FLASH ON** and **CANCEL**.

Description

Tap the barcode icon to the right of the search bar in the *Add Food* tab. Frame the barcode within the green box: recognition happens automatically as soon as the code comes into focus, without pressing any buttons.

*In poorly lit environments, activate the flash by tapping **FLASH ON** at the top right. Hold the phone about 15–20 cm from the package for optimal results.*

3.5 Create a New Recipe

Step 3.5.1 — Open the form and add ingredients

(a) Form **Create Recipe**: fields *Recipe Name*, *Portions*, and *Procedure / Notes*. The **Ingredients** section shows *0 added*. At the bottom are the buttons **+ Ingredients** and **Save**.

(b) Screen **Add Ingredient** with tab *Add Food*: search bar with barcode. Below is the link *Can't find the food? Register it yourself!*

(c) Tab *Saved Foods*: list of already registered foods or the message *No saved food* if empty.

Description

From the *Recipes* section, tap the green **+** button to open the *Create Recipe* form. Fill out the name, number of portions, and optional notes, then press **+ Ingredients** to add each component. Each added ingredient appears in the list with edit and delete icons. When finished, press **Save**.

3.6 View Meal Details

Step 3.6.1 — Open the time slot detail screen

Figure 13: Screen **Breakfast**: orange banner with icon and food counter, date navigation, + button to add foods. The *Nutritional Summary* shows progress bars for Calories, Carbs, Protein, and Fat. At the bottom is the list of *Consumed Foods* with edit and delete icons.

Description

Tap a time slot on the main screen to open the detailed summary with the colored banner, the nutritional summary with progress bars, and the list of consumed foods with the edit (blue pencil) and delete (red trash can) icons.

4 Setting Goals

Goals define the reference values for calories, macronutrients, and weight that the app uses to calculate progress. Setting realistic goals is essential for obtaining meaningful tracking data.

4.1 Access and Configure Goals

Step 4.1.1 — Open Settings and select My Goals

(a) Screen **Settings**: sections for Account (My profile, My goals, Notifications, Language and country), Support (Help, Privacy policy, About us), and Actions (Report an issue, Log out).

(b) Screen **My goals**: *Weight* section with *Current weight* (60.0 kg) and *Goal weight* (70.0 kg). Section *Macronutrients* with *Calorie goal* (2000.0 kcal), *Carbs* (130.0 g), *Protein* (45.0 g), and *Fat* (36.0 g). At the bottom are the expandable sections *Macro Details*, *Vitamins*, and *Minerals*.

Description

Tap the gear icon in the top right to open settings, then select **My goals**. The screen gathers the parameters into two sections:

- **Weight** — the *Current weight* is the starting point for calculating needs; the *Goal weight* is the target to reach (can be higher or lower than the current weight)
- **Macronutrients** — the *Calorie goal* defines the daily caloric limit; the Carbs, Protein, and Fat fields set the limits in grams

Next step

Enter the desired values and press **Save**. The changes are applied immediately throughout the application. The green confirmation banner appears at the bottom of the screen.

How to choose the right values: a common starting point is carbs 45–65%, protein 10–35%, fat 20–35% of total daily calories. Consult a nutrition professional for personalized values.

5 Viewing Progress

The application offers four time views to analyze the caloric and nutritional trends: daily, weekly, monthly, and yearly, accessible from the **Charts** section in the navigation bar.

5.1 Access Progress Data

Step 5.1.1 — Open the Charts section

Figure 15: Screen **Charts** with active *Daily* tab: green box *Nutritional statistics* with logged items, tracked days, and date of last entry. Below are the filter selector, the four time tabs, and the red box with the total calories.

Description

Tap the **Charts** icon in the navigation bar. At the top appears the green box with the global summary, then the **Filters** panel with the selected nutrient (default: Calories) and the date range. The four tabs allow you to change the granularity of the view.

5.2 Analyze the Charts

Step 5.2.1 — Bar Chart — Calories Over Time

Figure 16: Screen **Charts** with active *Daily* tab. At the top is the **Export PDF report** panel with the **Print PDF** (green) and **Share PDF** buttons. The **Calories over time** chart shows three red vertical bars for April 28, 29, and 30: 779 kcal, 143 kcal, and 377 kcal. The scale on the vertical axis goes from 0.0 to 779 kcal. Below starts the *Macronutrient distribution* section.

Description

The **Calories over time** bar chart shows the daily caloric intake for the selected period. Each red vertical bar represents one day, with the value in kcal indicated above. The height is proportional to the total calories: days with few logged foods produce shorter bars (like April 29 with 143 kcal), days with more meals produce taller bars (like April 28 with 779 kcal). The vertical axis automatically adapts to the maximum value of the period.

Export PDF Report

Above the chart, the **Export PDF report** panel offers two buttons:

- **Print PDF** (green) — generates the document and opens the operating system's print window
- **Share PDF** (white with border) — generates the document and opens the share panel to send it via email, WhatsApp, or any other installed app

Step 5.2.2 — Pie Chart — Macronutrient Distribution

Figure 17: Screen **Charts** — **Macronutrient distribution** section: ring chart with the percentage breakdown of macronutrients. The legend indicates Carbs 44.7%, Protein 12.0%, and Fat 43.3%. The horizontal bars below show the absolute values: Carbs 155.6 g (orange bar), Protein 41.9 g (blue bar), and Fat 67.1 g (purple bar).

Description

Scrolling down in the *Charts* screen reveals the **Macronutrient distribution** section, with two complementary representations:

- **Ring Chart** — visually shows the proportion among the three macronutrients: the golden/orange segment represents Carbs, the dark blue one Protein, and the purple

one Fat. The percentages in the legend on the right allow you to read the exact values at a glance

- **Horizontal Bars** — show both the percentage and the absolute value in grams of each macronutrient, making it easy to compare with the goals set in the *My goals* section

How to interpret the data

In the example shown, Fat makes up 43.3% of the total energy intake (67.1 g), a value higher than the recommended threshold of 20–35%. Carbs stand at 44.7% (155.6 g) and Protein at 12.0% (41.9 g). This information allows you to identify imbalances in the macronutrient distribution and adjust food choices in the following days.

Next step

Use the **Filters** panel at the top of the screen to change the displayed nutrient (e.g., from Calories to Carbs) and the date range. Tap the **Weekly**, **Monthly**, or **Yearly** tabs to view the trend over longer periods.

Comparing the ring chart and the goals in My goals is the most effective way to evaluate if your diet is aligned with your targets. If one slice is much larger than the others, it's advisable to rebalance your meals in the following days.

5.3 Using the Calendar

Step 5.3.1 — Open the Calendar

Figure 18: Screen **Calendar** of April 2026: days in red without logged meals, the 28th in green with a blue border (current day with logged meal), future days in gray. At the bottom is the legend: green = Logged meals, red = No meals.

Description

Tap the **Calendar** icon in the navigation bar. The color code immediately identifies logged days: green (meal present), red (no meal), light gray (future days), blue border (current day). Tap a day to view the detail of the meals for that date.

6 Account Settings

The *Settings* section gathers all personalization options: personal profile, notifications, units of measure, language, and account management.

6.1 Open Settings

Step 6.1.1 — Access the Settings screen

Figure 19: Screen **Settings**: the three sections Account, Support, and Actions with all available options, each with its own icon.

Description

Tap the gear icon in the top right to open settings.

Option	Function
My profile	Change first name, last name, height, birth date, gender, and photo
My goals	Set target calories, weight, macros, and micronutrients
Notifications	Meal and hydration reminders with custom times
Language and country	Language (IT, EN, ZH, AR) and reference country
Help	Help center with frequently asked questions
Privacy policy	Document on data management policies
About us	Information about the application and the team
Report an issue	Direct report to the support team
Log out	Log out from the current account

6.2 Modify Account Data

Step 6.2.1 — Update your personal profile

Figure 20: Screen **My profile**: profile photo with green camera icon, fields *First Name* (Christian), *Last Name* (Donzelli), *Height* (175.0), *Date of Birth* (11/30/-1) and dropdown menu *Gender* (Male). At the bottom is the green **Save** button.

Description

Tap **My profile** to modify your personal data:

- **Profile photo** — tap the green camera icon to take a photo or choose one from your gallery
- **First and Last Name** — the user's personal information
- **Height** — in centimeters, used for needs calculation
- **Date of Birth** — used to calculate the basal metabolic rate
- **Gender** — affects the caloric needs formula

Press **Save** to confirm. The app automatically updates the nutritional calculations based on the new data.

6.3 Configure Notifications

Step 6.3.1 — Enable reminders

(a) Screen **Notifications** with active toggles: *Meal reminders* with times Breakfast 7:30 AM, Lunch 12:00 PM, Dinner 7:00 PM, Snacks 3:00 PM; *Water reminder* with frequency *Every 30 minutes*.

(b) Dropdown *Reminder frequency* open: *Every 30 minutes* (selected), *Every 1 hour*, *Every 2 hours*, and *I DECIDE*. At the bottom is the *Alert History* with recent notifications.

Description

In the *Notifications* screen, two toggles are available:

- **Meal reminders** — turning this on displays the four time slots; tap a green time to modify it with the system selector
- **Water reminder** — turning this on displays the frequency menu (Every 30 min, Every 1 hour, Every 2 hours, I DECIDE)

At the bottom is the **Alert History** with recent notifications; tap **Clear** to delete it.

6.4 Change Language and Country

Step 6.4.1 — Configure localization

Figure 22: Screen **Language and Country**: *Language* menu open with *Italian* selected, *English*, *Simplified Chinese*, and *Arabic*. Below is the *Country* section with *Italy*, *England*, *China*, and *Egypt*.

Description

The available languages are Italian, English, Simplified Chinese, and Arabic. The change applies to the interface when the app is restarted.

6.5 Report an Issue

Step 6.5.1 — Send a report to support

11:00

← Segnala un problema

Segnala un problema

Descrivi dettagliatamente il problema riscontrato...

INVIA SEGNAZIONE

Figure 23: Screen **Report an issue**: text field with placeholder *Describe in detail the issue encountered...* and green **SEND REPORT** button.

Description

Tap **Report an issue** in the *Actions* section. Fill out the text field with a detailed description and press **SEND REPORT**.

For a faster resolution, include in your report the device model (e.g., iPhone 14, Samsung Galaxy S23), the version of the operating system, and the precise description of the steps that led to the problem.
